OPTIONAL **LOCKING SYSTEM FOR BOXES**

The **new semiautomatic pad box closing system** is a smart innovation from Ferrari international to make the operators' job simple.

This system allows to pull out and put back in place the stabilizer pads **single-handed**.

In fact, once the cotter pin is removed, **the closure will lift itself as the pad is extracted**. The same thing happens when the pad is put back in place.

It can be installed **both on single and double boxes**, as well as on pre-existing boxes already owned by the operators.
